What's new in ClaimCenter for Palisades

Here are the Palisades release highlights for ClaimCenter. For more details, see the **ClaimCenter** section of the *InsuranceSuite Release Notes*.

Claims for coinsured policies

ClaimCenter now supports paying claims against coinsured policies.

A claim that is associated with a coinsurance agreement on the policy is eligible for payment according to one of the following methods:

Lead funds claims

> The leader insurer is responsible for funding the claim in whole and then recovering monies from followers.

Own claim share

> Each insurer is responsible for paying the percentage according to the coinsurance layer agreement.

ClaimCenter now provides the ability to do the following:

- View the coinsurance agreement information on the policy.
- Pay coinsurance claims according to either a lead funds claims method or an own claim share method.
- Integrate with a policy administration system (PAS), such as PolicyCenter, and a billing system, such as BillingCenter, to capture policy information and billing offsets, respectively.
- View coinsurance transactions by selecting the **Financials > Coinsurance Summary** screen. You can also toggle between **Our Share** and **Total Amounts** options in the **Financials > Summary** screen for all claim financials.

ProNavigator for ClaimCenter

ProNavigator is an AI-powered, insurance-specific knowledge platform embedded in ClaimCenter that delivers guidance at the point of decision. Adjusters can ask targeted coverage or process questions and receive immediate, cited answers from approved sources, with content pulled from guidelines, procedures, regulations, and more. ProNavigator surfaces this information directly in context (such as during FNOL). For example, an adjuster can ask which acknowledgment or decision timelines apply for a given jurisdiction and see the state-specific rules and deadlines right in the claim. The result is faster, more defensible decisions; improved compliance; and reduced claim handling time. For more information, see *ProNavigator Integration*.

Claim Summarization for ClaimCenter (Restricted Availability)

Claim Summarization is now available to a selected group of customers as part of the ProNavigator for ClaimCenter. Claim Summarization is embedded directly in the ClaimCenter interface and uses Large Language Models (LLMs) to generate short, focused summaries that help adjusters quickly understand the key facts of each claim without leaving their primary workflow. The Palisades release introduces globalization support for insurers operating across multiple regions and languages. For details, see Claim Summarization for ClaimCenter (Restricted Availability).

Cloud API for ClaimCenter (version 1.15.0)

The following endpoints have been added to Cloud API. If you are doing a core update, you might want to add these endpoints to the appropriate `role.yaml` files to provide authorization to users and services as needed.

New endpoints

The following endpoints have been added to Cloud API. If you are doing a core update, you might want to add these endpoints to the appropriate `role.yaml` files to provide authorization to users and services as needed.

Claim API

Added `/bulk-invoices` endpoints:

- `GET /bulk-invoices`
- `POST /bulk-invoices`
- `GET /bulk-invoices/{bulkInvoiceId}`
- `PATCH /bulk-invoices/{bulkInvoiceId}`
- `DELETE /bulk-invoices/{bulkInvoiceId}`

Added `/bulk-invoices/{bulkInvoiceId}/bulk-invoice-items` endpoints:

- `GET /bulk-invoices/{bulkInvoiceId}/bulk-invoice-items`
- `POST /bulk-invoices/{bulkInvoiceId}/bulk-invoice-items`
- `GET /bulk-invoices/{bulkInvoiceId}/bulk-invoice-items/{bulkInvoiceItemId}`
- `PATCH /bulk-invoices/{bulkInvoiceId}/bulk-invoice-items/{bulkInvoiceItemId}`
- `DELETE /bulk-invoices/{bulkInvoiceId}/bulk-invoice-items/{bulkInvoiceItemId}`

Added custom POST endpoints to `/bulk-invoices`:

- `POST /bulk-invoices/{bulkInvoiceId}/validate`
- `POST /bulk-invoices/{bulkInvoiceId}/submit`
- `POST /bulk-invoices/{bulkInvoiceId}/request-stop`
- `POST /bulk-invoices/{bulkInvoiceId}/request-void`
- `POST /bulk-invoices/{bulkInvoiceId}/retry`

Added `claims/{claimId}/concurrent-employers` endpoints:

- `GET /claims/{claimId}/concurrent-employers`
- `POST /claims/{claimId}/concurrent-employers`
- `GET /claims/{claimId}/concurrent-employers/{concurrentEmploymentId}`
- `PATCH /claims/{claimId}/concurrent-employers/{concurrentEmploymentId}`
- `DELETE /claims/{claimId}/concurrent-employers/{concurrentEmploymentId}`
